

Rod-Conveyor for egg collection

Main facts at a glance

The LUBING rod-conveyor was designed to be easily and therefore

inexpensively installed. The design makes it easy to adapt the conveyor

to any given situation. The heart of the system is the mounted conveyor belt which due to arrangement minimizes the number of damaged eggs.

It is made out of stabilized plastic pipes which are connected by chains on both sides.

The belt is guided by profiles made from galvanized steel which are connected to each other by floor supports that can be changed in height.

Due to the distance between the pipes smaller eggs will not fall through the belt even at a gradient of 20°.

System width

Width	Capacity
350 mm	30.000 Eggs/h
500 mm	45.000 Eggs/h

The drive units

up to 40 m

up to 60 m

from 60 to 100 m
